This book introduces community planning as practiced in the United States, focusing on the comprehensive plan. Sometimes known by other names—especially master plan or general plan—the type of plan described here is the predominant form of general governmental planning in the U.S. Although many government agencies make plans for their own programs or facilities, the comprehensive plan is the only planning document that considers multiple programs and that accounts for activities on all land located within the planning area, including both public and private property. Written by a former president of the American Planning Association, Community Planning is thorough, specific, and timely. It addresses such important contemporary issues as sustainability, walkable communities, the role of urban

design in public safety, changes in housing needs for a changing population, and multi-modal transportation planning. Unlike competing books, it addresses all of these topics in the context of the local comprehensive plan. There is a broad audience for this book: planning students, practicing planners, and individual citizens who want to better understand local planning and land use controls. Boxes at the end of each chapter explain how professional planners and individual citizens, respectively, typically engage the issues addressed in the chapter. For all readers, *Community Planning* provides a pragmatic view of the comprehensive plan, clearly explained by a respected authority. *Engaging in Community Music: An Introduction* focuses on the processes involved in designing, initiating, executing and evaluating community music practices. Designed for both undergraduate and graduate students, in community music programmes and related fields of study alike, this co-authored textbook provides explanations, case examples and 'how-to' activities supported by a rich research

base. The authors have also interviewed key practitioners in this distinctive field, encouraging interviewees to reflect on aspects of their work in order to illuminate best practices within their specialisations and thereby establishing a comprehensive narrative of case study illustrations. Features: a thorough exploration and description of the emerging field of community music; succinctly and accessibly written, in a way in which students can relate; interviews with 26 practitioners in the US, UK, Australia, Europe, Canada, Scandinavia and South Africa, where non-formal education settings with a music leader, or facilitator, have experienced success; case studies from many cultural groups of all ages and abilities; research on life-long learning, music in prisons, music and ritual, community music therapy, popular musics, leisure and recreation, business and marketing strategies, online communities – all components of community music. Professor Fikret Berkes provides a unique introduction to the social and interdisciplinary dimensions of

biodiversity conservation. Examining a range of approaches, new ideas, controversies and debates, he demonstrates that biodiversity loss is not primarily a technical issue, but a social problem that operates in an economic, political and cultural context. Berkes concludes that conservation must be democratized in order to broaden its support base and build more inclusive constituencies for conservation.

This book explains the growing field of syndemic theory and research, a framework for the analysis and prevention of disease interactions that addresses underlying social and environmental causes. This perspective complements single-issue prevention

strategies, which can be effective for discrete problems, but often are mismatched to the goal of protecting the public's health in its widest sense.

"Merrill Singer has astutely described why health problems should not be seen in isolation, but rather in the context of other diseases and the social and economic inequities that fuel them. An important read for public health and social

scientists." —Michael H. Merson, director,

Duke Global Health Institute "Not only

does this book provide a persuasive theoretical biosocial model of syndemics,

but it also illustrates the model with a

wide variety of fascinating historical and

contemporary examples." —Peter J. Brown,

professor of Anthropology and Global

Health and director, Center for Health,

Culture, and Society, Emory University

"The concept of syndemics is Singer's most

important contribution to critical medical

anthropology as it interfaces with an

ecosocial approach to epidemiology." —Mark

Nichter, Regents Professor, Department of

Anthropology, University of Arizona

"Merrill Singer offers the public the most

comprehensive work ever written on this key area of research and policy making."

—Francisco I. Bastos, chairman of the graduate studies on epidemiology, Fundacao Oswaldo Cruz "Exquisitely describes how this new approach is a critical tool that brings together veterinary, medical, and social sciences to solve emerging

infectious and non-infectious diseases of today's world." —Bonnie Buntain, MS, DVM, diplomate, American College of Veterinary Preventive Medicine

"For too long the great integrative perspectives on modern biomedicine and public health disease ecology and social medicine-have remained more or less separate. In this innovative and provocative book, Merrill Singer develops a valuable synthesis that will reshape the way we think about health and disease." —Warwick H. Anderson, MD, PhD,

professorial research fellow, Department of History and Centre for Values, Ethics, and the Law in Medicine, University of

Sidney Community organizers build

solidarity and collective power in

fractured communities. They help ordinary people turn their private pain into public

action, releasing hidden capacities for leadership and strategy. In *Collective Action for Social Change*, Aaron Schutz and Marie G. Sandy draw on their extensive experience participating in community organizing activities and teaching courses on the subject to empower novices to think like an organizers.
