Analysis

Emergence Nov 07 2021 We are confronted with emergent systems everywhere and Holland shows how a theory of emergence can predict many complex behaviours in art and science. This book will appeal to scientists and anyone interested in scientific theory.

Only in America Jul 23 2020 How does a film script by an unknown writer get to be read by a Hollywood studio boss? What happens if he loves it? And what do his people do, if they have no idea who wrote it? Stuck in workaday London, rejected by the literary elite, wannabe screenwriter Milly has no idea of the pandemonium her script is causing Stateside. And so it falls to LA movie executive Mitch to cut through the Hollywood madness, save his own job, and rescue Milly from obscurity. All he has to do is find her. So begins a breathless romantic hunt, and a hilarious modern day fairytale from a sensational new voice in contemporary comic fiction.

Tiny You Jan 09 2022 **Tiny You** tells the story of one of the most successful political movements of the twentieth century: the grassroots campaign against legalized abortion. While Americans have rapidly changed their minds about sex education, pornography, arts funding, gay teachers, and ultimately gay marriage, opposition to

legalized abortion has only grown. As other socially conservative movements have lost young activists, the pro-life movement has successfully recruited more young people to their cause. Jennifer L. Holland explores why abortion dominates conservative politics like no other cultural issue. Looking at anti-abortion movements in four western states since the 1960s--turning to the fetal pins passed around church services, the graphic images exchanged between friends, and the fetus dolls given to children in school--she argues that activists made fetal life feel personal to many Americans. Pro-life activists persuaded people to see themselves in the pins, images, and dolls they held in their hands and made the fight against abortion the primary bread-and-butter issue for social conservatives. Holland ultimately demonstrates that the success of the pro-life movement lies in the borrowed logic and emotional power of leftist activism.

Behind the Lines Dec 28 2020 It's 1863, and Katie O'Farrell's brother may have to go to war in place of a wealthy man's son. Like Katie's father, the entire Irish community of New York City feels that slavery is not their problem, but soon the city explodes in violence as the New York Draft Riots begin.

Nursing Evidence-Based Practice Skills Mar 31 2021 Nursing students require a unique guide to research and evidence based practice (EBP) to help them succeed in both the classroom and the clinical area. This book is a one-stop-shop of the theory and practice of EBP including practical tips for assignments and placements.

Plastic Limit Analysis of Plates, Shells and Disks Aug 24 2020 This revised and updated edition of a book first published in 1972 has kept the general features of the first edition but as could be expected after two decades there are also substantial differences. For instance optimal design has been completely deleted as the developments in this field have been so great that it warrants a book in itself. The fundamental concepts based on Drucker's postulate rather than those of Prager's assumptions function have been introduced. Problems of cyclic loading have been given some more extensive treatment, both in the general theory and in applications. General indications and references have been added for reinforced concrete plates and shells. A general presentation of the yield condition for both plates and shells has been included and the section on the influence of axial force in plates has been almost re-written. Finally, a chapter has been added exclusively devoted to the numerical approach to limit load and shake-down load evaluation. Like the previous edition the book is directed towards engineering applications. The theory is rigorously developed and is therefore of great use to engineering students in plastic limit analysis.

Furthermore, applications to metal and reinforced concrete plates and shells and to metal disks are treated by both analytical and numerical approaches.

Environmental Values Nov 26 2020 We live in a world confronted by mounting environmental problems; increasing global deforestation and desertification, loss of species diversity, pollution and global warming. In everyday life people mourn the loss of valued landscapes and urban spaces. Underlying these problems are conflicting priorities and values. Yet dominant approaches to policy-making seem ill-equipped to capture the various ways in which the environment matters to us. Environmental

Values introduces readers to these issues by presenting, and then challenging, two dominant approaches to environmental decision-making, one from environmental economics, the other from environmental philosophy. The authors present a sustained case for questioning the underlying ethical theories of both of these traditions. They defend a pluralistic alternative rooted in the rich everyday relations of humans to the environments they inhabit, providing a path for integrating human needs with environmental protection through an understanding of the narrative and history of particular places. The book examines the implications of this approach for policy issues such as biodiversity conservation and sustainability. Written in a clear and accessible style for an interdisciplinary audience, this volume will be ideal for student use in environmental courses in geography, economics, philosophy, politics and sociology.

The History of the Netherlands Apr 12 2022

History of Holland Dec 20 2022 This 1922 book presents an account of the development of the Netherlands, from the Burgundian period up until the reign of Queen Wilhelmina.

Mental Capacity Legislation Jan 29 2021 This book draws on clinical experience, case law and the developing research literature accrued during the six years that the Mental Capacity Act (MCA) and the Deprivation of Liberty Safeguards (DoLS) have been in effect. It focuses on the theory underpinning the principles of this legislation and the practical challenges of applying it in clinical settings. It also compares and contrasts the remit of the Mental Capacity Act with that of the Mental Health Act. The book is aimed at psychiatrists and other mental health professionals who treat individuals who lack capacity, and also at those called upon to guide and advise colleagues in acute hospitals and residential care settings about the assessment of capacity, DoLS and the appropriate use of best interests principles. The contributors, who include both clinicians and clinical academics, have been chosen to ensure that both practical and research considerations pertaining to the statute are taken into account. (Please note, this book applies to the law in England and Wales only.)

Emergence Oct 26 2020 In this important book, John H. Holland dramatically shows us that the “emergence” of order from disorder has much to teach us about life, mind and organizations. Creative activities in both the arts and the sciences depend upon an ability to model the world. The most creative of those models exhibits emergent properties, so that “what comes out is more than what goes in.” From the ingenious checkers-playing computer that started beating its creator in game after game, to the emotive creations of the poet, Emergence shows that Holland's theory successfully predicts many complex behaviors in art and science.

Holland-Frei Cancer Medicine 8 Feb 16 2020 Holland Frei Cancer Medicine serves as a quick reference to current information on an extensive list of cancers, including breast, lung, thyroid, colorectal, ovarian, prostate, and gastric cancer, to name but a few. Presented as an accessible pocket-sized handbook, the chapters are organized in an outline format, offering only the most essential information on the etiology, staging (including TNM staging) and treatment for each cancer type. Individual chapters are

devoted to the molecular biology of cancer, cancer prevention, cancer screening, the mechanisms of chemotherapy, and diagnostic imaging in cancer. Additionally, each chapter lists all the major phase III clinical trials, and therefore, serves as an excellent reference of the major randomized controlled trials for each cancer reported to date. Specific chapters are also dedicated to the discussion of oncologic emergencies, pain and palliation, and prescription complications. At the conclusion of the book, a glossary of oncologic terms and chemotherapeutic drug programs, a table of common cancer incidences, and an overview of the mechanisms, common uses, and related toxicities of various anti-cancer agents are featured. In addition, performance status tables, mathematical formulas and a listing of common biomedical / cancer web sites are highlighted.

In The Shadow Of The Sword Mar 11 2022 In this 'thrilling. . .profoundly important book' (Christopher Hart, Sunday Times) and Sunday Times Top Ten Bestseller, the acclaimed author of Rubicon gives a panoramic-and timely-account of the rise of Islam In the 6th century AD, the Near East was divided between two great empires: the Persian and the Roman. A hundred years on, and one had vanished for ever, while the other was a dismembered, bleeding trunk. In their place, a new superpower had arisen: the empire of the Arabs. So profound was this upheaval that it spelled, in effect, the end of the ancient world. But the changes that marked the period were more than merely political or even cultural: there was also a transformation of human society with incalculable consequences for the future. Today, over half the world's population subscribes to one of the various religions that took on something like their final form during the last centuries of antiquity. Wherever men or women are inspired by belief in a single god to think or behave in a certain way, they bear witness to the abiding impact of this extraordinary, convulsive age - though as Tom Holland demonstrates, much of what Jews, Christians and Muslims believe about the origins of their religion is open to debate. In the Shadow of the Sword explores how a succession of great empires came to identify themselves with a new and revolutionary understanding of the divine. It is a story vivid with drama, horror and startling achievement, and stars many of the most remarkable rulers ever seen. 'A compelling detective story of the highest order, In the Shadow of the Sword is also a dazzlingly colourful journey into the world of late antiquity. Every bit as thrilling a narrative history as Holland's previous works, In the Shadow of the Sword is also a profoundly important book. It makes public and popular what scholarship has been discovering for several decades now; and those discoveries suggest a wholesale revision of where Islam came from and what it is' (Christopher Hart, Sunday Times)

Feline Diagnostic Imaging Jun 02 2021 This book offers a comprehensive resource for imaging the feline patient, with an emphasis on the unique considerations of imaging cats. It focuses on radiology and ultrasound, with some coverage of advanced imaging such as computed tomography and magnetic resonance imaging. Incorporating more than 1750 high-quality images, it is an invaluable reference for any veterinary practitioner with a significant feline caseload. Feline Diagnostic Imaging begins with

information on the radiographic evaluation of the thorax, abdomen, and musculoskeletal structures, including normal anatomy and pathology, followed by a review of common echocardiographic and abdominal ultrasound findings and abnormalities. Advanced imaging of the skull using computed tomography and magnetic resonance imaging cases of brain and spinal disease are also included. The book: Provides imaging information specifically tailored to the particular needs of cats Emphasizes the modalities most commonly used in general practice, with some discussion of advanced imaging Gives a complete overview of diagnostic imaging for the feline patients Includes tips and tricks for the unique considerations of working with cats Presents essential information for any practitioner treating feline patients Offering a feline focus not found in other imaging books, *Feline Diagnostic Imaging* is an essential purchase for veterinarians wishing to improve their diagnostic imaging skills in cats. It's also an excellent guide for veterinary radiologists, and veterinary students and residents.

The Early Dutch Sinologists (1854-1900) Nov 14 2019 In *The early Dutch Sinologists* Koos Kuiper gives a detailed account of the studies and work of the 24 Dutchmen trained as "interpreters" for the Netherlands Indies before 1900. Many primary sources give a fascinating picture of personal cross-cultural contacts.

Weighted Norm Inequalities and Related Topics Jan 17 2020 The unifying thread of this book is the topic of Weighted Norm Inequalities, but many other related topics are covered, including Hardy spaces, singular integrals, maximal operators, functions of bounded mean oscillation and vector valued inequalities. The emphasis is placed on basic ideas; problems are first treated in a simple context and only afterwards are further results examined.

Sevenoaks Nov 19 2022

History of Functional Analysis Oct 14 2019 *History of Functional Analysis* presents functional analysis as a rather complex blend of algebra and topology, with its evolution influenced by the development of these two branches of mathematics. The book adopts a narrower definition—one that is assumed to satisfy various algebraic and topological conditions. A moment of reflections shows that this already covers a large part of modern analysis, in particular, the theory of partial differential equations. This volume comprises nine chapters, the first of which focuses on linear differential equations and the Sturm-Liouville problem. The succeeding chapters go on to discuss the "crypto-integral" equations, including the Dirichlet principle and the Beer-Neumann method; the equation of vibrating membranes, including the contributions of Poincaré and H.A. Schwarz's 1885 paper; and the idea of infinite dimension. Other chapters cover the crucial years and the definition of Hilbert space, including Fredholm's discovery and the contributions of Hilbert; duality and the definition of normed spaces, including the Hahn-Banach theorem and the method of the gliding hump and Baire category; spectral theory after 1900, including the theories and works of F. Riesz, Hilbert, von Neumann, Weyl, and Carleman; locally convex spaces and the theory of distributions; and applications of functional analysis to differential and partial

differential equations. This book will be of interest to practitioners in the fields of mathematics and statistics.

History in Person Jul 15 2022 How is history lived "in person" -- in everyday, subjectively experienced events and practices? How does it shape the identities of individual people? The ten essays in this book explore these questions within a framework of conflict or "struggle," demonstrating how subjects' intimate self-making is related to their participation in what the authors call "contentious local practice."

Holland 1940 Dec 16 2019 The history of how the Luftwaffe planned to knock out Holland in a surgical, lightning campaign, but instead suffered wounds against the outnumbered but effective Dutch that would come to haunt them in the Battle of Britain. From the perspective of the German High Command, its invasion of the Netherlands on May 10, 1940 was supposed to be a lightning fast surgical strike, aimed at shoring up the right flank of the Wehrmacht's massive assault on France and Belgium. In a bold manoeuvre, the German Luftwaffe would launch what was at the time the largest airborne operation in history, calculating that surprise and speed would negate the need for a lengthy ground campaign or large numbers of ground troops, using paratroops and air-landing troops to capture key strategic point that would clear the path for the subsequent capitulation of main Dutch city and the government itself. The entire operation was expected to take only 24 hours. The actual campaign proved to be much less efficient and had devastating results for the Luftwaffe. The Netherlands possessed Europe's first fully integrated anti-aircraft network, coordinated from a central command as well as modern and competitive aircraft. Furthermore, the Dutch were not taken by surprise on May 10, 1940, as is often assumed in most histories, thanks to the efforts of Dutch intelligence services and an early radar system. By the end of May 10, only some of the German objectives had been achieved and the battle in Dutch skies and for Dutch airfields stalemated for a further four days. Finally on the fifth day of the invasion with its pre-campaign strategy having largely failed, the Luftwaffe resorted to the terror bombing of Rotterdam in a desperate and successful attempt to force the

Dutch government to capitulate. While the Battle of the Netherlands can be seen as a tactical victory for Germany, strategically it has to be seen as the first major defeat for the Luftwaffe. Explaining the technical capabilities and campaign plans of the two sides, and charting how the battles were fought, this fascinating book re-examines and reassesses this little-known part of World War II. Dutch-speaking aviation analyst Ryan Noppen argues that while the air campaign against Holland was a tactical victory for Germany, the ability of the well-prepared but outnumbered Dutch to inflict heavy losses was a warning of what would come when the Luftwaffe launched the Battle of Britain.

Nine Introductions in Complex Analysis - Revised Edition Jan 21 2023 The book addresses many topics not usually in "second course in complex analysis" texts. It also contains multiple proofs of several central results, and it has a minor historical perspective. - Proof of Bieberbach conjecture (after DeBranges) - Material on asymptotic values - Material on Natural Boundaries - First four chapters are comprehensive introduction to entire and meromorphic functions - First chapter (Riemann Mapping Theorem) takes up where "first courses" usually leave off

My Life with a Theory Feb 22 2023 In 1959, John L. Holland introduced a theory of vocational choices, which is still used today. It embraces a personality typology involving six models (widely known as the Holland Code, or RIASEC). Here in this new publication, readers will finally see Holland's previously unpublished autobiography and appreciate this antidote for imperfect secondary accounts of the theory. This long-awaited book provides counseling practitioners, counselor educators, researchers, vocational psychologists and students with: 1) a clear and concise understanding of the Holland Theory and its implications for practice, 2) a snapshot of John Holland's life-long effort to establish the efficacy of the theory, and 3) an appreciation for the life of an accomplished theoretician and researcher and his impact on the counseling profession.

Applying the Roper-Logan-Tierney Model in Practice - E-Book Sep 05 2021 New edition of a successful textbook which demonstrates the theory and practice of one of the most popular models of nursing. Karen Holland, Jane Jenkins and their colleagues carefully explain and explore how the Roper-Logan-Tierney Model can help today's student learn how to care for patients in a variety of health care contexts and use it as a framework for their nursing practice. Rich with 'real-life' case studies and thought provoking exercises, this book has a helpful problem solving approach which strongly encourages further learning and reflection. New edition of a successful textbook which explains the theory and practice of one of the most popular models of nursing Structured approach to a core range of 'activities of living' clearly illustrate how they interconnect and may be promoted, or compromised, by health and illness, and influenced by external factors Explains the theory to show how it can be applied in practice to assess, plan, deliver and evaluate individualised nursing care A helpful case study approach enables readers see how the model works in 'real life' Written by experts who actively encourage a problem-solving approach to nursing care and practice Additional exercises are designed to encourage further learning and reflective practice, as well as develop skills in literature searching and evidence-based care Helpful appendices include a range of reference material such as the Care Plan Documentation and Audit Tool, Laboratory Reference Values, the Roper-Logan Tierney Assessment Schedule and other commonly used nursing documentation Ideal for use in a variety of contemporary health care delivery environments including the acute and community-based settings

Twenty-Five Ghost Stories Aug 16 2022 Twenty-Five Ghost Stories by W. Bob Holland Twenty-Five Ghost Stories is a classic collection of scary short stories.

The HPV Vaccine On Trial Feb 10 2022 A Groundbreaking Guide to the HPV Vaccine and the Science, Safety, and Business Behind It Cancer strikes fear in people's hearts around globe. So the appearance of a vaccine to prevent cancer—as we are assured the human papillomavirus (HPV) vaccine will—seemed like a game-changer. Since 2006, over eighty countries have approved the vaccine, with glowing endorsements from the world's foremost medical authorities. Bringing in over \$2.5 billion in annual sales, the HPV vaccine is a pharmaceutical juggernaut. Yet scandal now engulfs it worldwide. The HPV Vaccine on Trial is a shocking tale, chronicling the global efforts to sell and compel this alleged miracle. The book opens with the vaccine's invention, winds through its regulatory labyrinths, details the crushing denial and dismissal of reported harms and deaths, and uncovers the enormous profits pharma and inventors have reaped. Authors Holland, Mack Rosenberg, and Iorio drill down into the clinical trial data, government approvals, advertising, and personal accounts of egregious injuries that have followed in countries as far-flung as Japan, Australia, Colombia, India, Ireland, the U.K. and Denmark. The authors have written an unprecedented exposé about this vaunted vaccine. Written in plain language, the book is for everyone concerned – parents, patients, doctors, nurses, scientists, healthcare organizations, government officials, and schools. Ultimately, this book is not just about

the HPV vaccine, but about how industry, government, and medical authorities may be putting the world's children in harm's way.

The Socialist Ideas of the British Left's Alternative Economic Strategy Mar 19 2020

This book provides the first book-length study of the political and economic ideas of the British left's Alternative Economic Strategy in the 1970s and early 1980s.

Discussing the AES's approaches to capitalism, the nation state and the working class, it argues that existing academic accounts have significantly overstated the radicalism of the strategy. Perhaps more notable, especially in the light of its stated 'revolutionary' aims, was the extent of its moderation – its continuities with post-war Labour revisionism, its marked reluctance to look beyond the market economy, the degree of its preoccupation with Britain's global-economic status, and its inability to break with Labourist politics of class co-operation in the national interest. While the book argues that the AES was the last 'class politics' socialist initiative in mainstream British politics, it also explores the ways in which its ideas perhaps prepared the way for New Labour in the 1990s, and its relationship with 'Corbynism' since 2015.

Finding Soutbek Sep 24 2020 The focal point of the novel is the small town of Soutbek. Its troubles, hardships and corruption, but also its kindness, strong community and friendships, are introduced to us in a series of stories about intriguingly interlinked relationships. Contemporary Soutbek is still a divided town - the upper town destitute, and the lower town rich, largely ignorant - and Finding Soutbek is a novel about the real conditions that shape the lives of ordinary, marginalised people. Karen Jennings's focus on the quiet but necessary heroism of the poor and disadvantaged makes her work universal.

Joseph Ellicott and the Holland Land Company Jun 14 2022

Dominion Dec 08 2021 'If great books encourage you to look at the world in an entirely new way, then Dominion is a very great book indeed . . . Written with terrific learning, enthusiasm and good humour, Holland's book is not just supremely provocative, but often very funny' Sunday Times History Book of the Year Christianity is the most enduring and influential legacy of the ancient world, and its emergence the single most transformative development in Western history. Even the increasing number in the West today who have abandoned the faith of their forebears, and dismiss all religion as pointless superstition, remain recognisably its heirs. Seen close-up, the division between a sceptic and a believer may seem unbridgeable. Widen the focus, though, and Christianity's enduring impact upon the West can be seen in the emergence of much that has traditionally been cast as its nemesis: in science, in secularism, and yes, even in atheism. That is why Dominion will place the story of how we came to be what we are, and how we think the way that we do, in the broadest historical context. Ranging in time from the Persian invasion of Greece in 480 BC to the on-going migration crisis in Europe today, and from Nebuchadnezzar to the Beatles, it will explore just what it was that made Christianity so revolutionary and disruptive; how completely it came to saturate the mind-set of Latin Christendom; and why, in a West that has become increasingly doubtful of religion's claims, so many of its instincts

remain irredeemably Christian. The aim is twofold: to make the reader appreciate just how novel and uncanny were Christian teachings when they first appeared in the world; and to make ourselves, and all that we take for granted, appear similarly strange in consequence. We stand at the end-point of an extraordinary transformation in the understanding of what it is to be human: one that can only be fully appreciated by tracing the arc of its parabola over millennia.

Nerve Jun 21 2020 SHORTLISTED for the 2021 BC and Yukon Book Prizes' Hubert Evans Non-Fiction Prize A personal story about not only facing but conquering fears. In 2015, Eva Holland was forced to confront her greatest fear when her mother had a stroke and suddenly passed away. After the shock and grief subsided, Holland began to examine the extent to which her many fears had limited her, and wondered whether or not it was possible to move past them. This sent Holland on a deep dive into the science of fear, digging into an array of universal and personal questions: Why do we feel fear? Where do phobias come from and how are they related to anxiety disorders and trauma? Can you really smell fear? (Yes.) What would it be like to feel no fear? Is there a cure for fear? Or, put differently, is there a better way to feel afraid? On her journey, Holland meets with scientists who are working to eliminate phobias with a single pill, she explores the lives of the few individuals who suffer from a rare disease that prevents them from ever feeling fear, and she immerses herself in her own fears including hurling herself out of a plane for her first skydive (and in the process, learns that there are right and wrong ways to face your fears). Fear is a universal human experience, and *Nerve* answers these questions in a refreshingly accessible way, offering readers an often personal, sometimes funny, and always rigorously researched journey through the science of facing our fears.

Dominic Holland Takes on Life Feb 27 2021 As a comedian, Dominic Holland has fearlessly confronted thorny subjects. Asking questions such as; When is an onion actually peeled? Rest assured, his writing here remains as intrepid. 31 comic essays on your life and his.

Going Dutch Apr 19 2020 A fascinating exploration of the relationship of competition and assimilation between the Netherlands and England during the 17th century, revealing the ways in which Dutch tolerance, resilience and commercial acumen effectively conquered Britain by reshaping its intellectual landscape, long before Dutch monarchs sat on the English throne.
